

Kitchen design: Undermounts, Cast Iron out, Acrylic in!

Today's consumers are design savvy. Kitchens are adding color and CorStone sinks are now the center of attention in the new designer kitchen.

January 23, 2007 (FPRC) --

Color is back. The biggest trend in the kitchen is the use of under counter sinks in color. Consumers are adding color by painting cabinets, installing colorful counter tops with CorStone's new designer undermount sinks.

CorStone's Optimum 5.0 series offers several under counter sink designs like the Narragansett, a 60/40 large bowl configuration or the 50/50 angled edge Nyatt.

To add to their appeal, CorStone's Optimum sinks come in a variety of colors and are available in either a gloss, metallic or matte finish. CorStone undermounts have become the center of attention both visually and functionally in the new designer kitchen.

What makes CorStone superior to other color under counter sinks? CorStone sinks are made of the highest grade of engineered acrylic and unlike the old fashion cast iron sinks, they are lightweight and extremely easy to install. CorStone sinks are NAHB and CSA certified for all standards of wear ability against impact, heat, stain and abrasions and CorStone is the ONLY sink manufacturer that additionally offers built in Micorban protection.

CorStone is headquartered in Greenville, Alabama. CorStone is the largest manufacturer of cast acrylic sinks in the United States. CorStone offers kitchen, island, bar/prep, bath lavs and laundry sinks in both drop in and undermounts.
