

Website Gives Consumers Unbiased Truth on Competing Rechargeable Batteries

Consumers can now get unbiased information quickly on how competing rechargeable battery products perform. No longer must consumers accept at face value manufacturers' claims on product packaging. They can now make truly informed buying decisions and make sure they're getting value when they buy rechargeable battery products.

Ottawa, ON Canada (FPRC) May 3, 2007 -- Website provides consumers with unbiased tests, reviews and information on rechargeable battery products.

The website launch of Rechargeable Battery Review (www.rechargeable-battery-review.com) means that consumers can now get unbiased information quickly on how competing rechargeable battery products perform. The website provides independent test results, product reviews and other information on rechargeable battery products. No longer must consumers accept at face value manufacturers' claims on product packaging. They can now make truly informed buying decisions and make sure they're getting value.

Due to increasing demand for energy in personal electronics, from toys to MP3 players and digital cameras, consumers are seeing the value in rechargeable batteries. Rechargeable battery products promise benefits such as higher capacity, re-usability and lower long term costs while helping the environment by reducing waste. These potential benefits can be lost if the products are sub-standard.

Manufacturers sell their products claiming high or superior performance and great value. Until now, the consumer has had no way to confirm these claims. Rechargeable Battery Review is the only source of unbiased information on competing rechargeable battery products.

There are thousands of different rechargeable battery products on the market today and their performance varies greatly. Rechargeable Battery Review provides consumers with the information needed to make an informed choice and thus reap all the potential benefits of rechargeable battery technology.

According to Guy Bonneau, who manages Rechargeable Battery Review, "If the consumer feels they are getting value from their rechargeable battery investment, they will continue to use the technology. If they have a bad experience, they may give up and never give rechargeable batteries a second chance. We want the consumer to be informed, satisfied and continue using rechargeable battery products."

Guy Bonneau is an electrical engineer with 20 years experience in areas of design and verification. The website includes rechargeable battery and charger tests and reviews, informative articles, FAQs and tips on battery chargers and rechargeable batteries and a forum for discussions.
