

Cad Drafting, Cad Conversion Offshore Service Center Announced by New York Document Scanning

New York Document Scanning, a US based company, specializes in transforming your manual drawings into clean, ready to use, computer generated drawings converted into DWG, DXF or DWF file formats.

July 22, 2007 (FPRC) -- New York Document Scanning announces the launch of new BPO services and manual cad conversion services. We offer 'offshore prices' and are also able to negotiate prices on larger orders. You get most economical rates as our outsourcing center is located in India – and a US based company offers convenience to the client. There is no need for costly wire transfers and you may ship us paper drawings if you don't have the scans. (No additional charge for scanning)

Technology and globalization has made it feasible for firms to take advantage of outsourcing rather than commit to permanent staff and expensive CAD software. New York Document Scanning has a team of qualified CAD Technicians who will work to your deadlines providing cost efficient service to your organization. We are able to utilize the Internet to act as if we are extra draftsman within your office.

We have an in-house team of more than 35 draftsman and offer a wide range of CAD services under a single roof. These include:

- * SolidWorks, AutoCAD, Micro station, Inventor, Revit & ArchiCAD
- * Interior & Exterior Architectural Rendering and Animation Services
- * 3D CAD and Modeling
- * CAD Drafting and Paper to CAD Conversion
- * Large Format Scanning
- * Data Entry from Scanned Images

There are a number of methods to convert your files to digital format. These methods include large format scanning (raster), raster to vector conversion (software) and manual conversion (draftsman).

Large format scanning is your cheapest option. We scan architecture, engineering, construction mylars, sepias, linen, blueprints, paper, and vellum into raster formats such as tiff, jpeg, pdf, cals and other formats. These raster files may be viewed, plotted or printed – but not edited. Data entry and indexing services follow as requested to capture drawing number, sheet no, title, revision, etc for search and document retrieval.

Raster to vector conversion is a process that converts a scan of the drawing (raster) into a line drawing (vector) through a “software program”. Automatic raster-to-vector conversion is limited by the ability of the software application to make decisions that require intelligence (draftsman), therefore the many hours of additional work are required to get the drawing to an accurate CAD standard.

Manual conversion (draftsman) is a process where your files are manually drawn with precision to perfect CAD format. The cad conversion is dimensionally correct, layered to your specifications, into

accurate working drawings. As requested, text is re-typed and drawings are re-scaled 1:1. Specified items are also converted to different layers and colors to conform to the drawing standards. The end result is a CAD file which is identical to the paper drawing and which requires no further work.

New York Document Scanning (www.new-york-document-scanning.com) currently serves customers in UK, Brazil and the US. New York Document Scanning services include high quality CAD Conversion, 3-D Modeling and Renderings. All the work is done in-house, which make it cost-effective and quality controlled.
