

SimulationExams.com CCNA Practice Tests

SimulationExams.com, a leading certification tests provider released CCNA (Cisco Certified Network Associate) practice tests. The practice tests provide a simulated test environment for candidates before appearing for the actual certification exam, and complement available study material. CCNA tests include several lab simulations for thorough hand-on preparation.

November 28, 2007 (FPRC) -- SimulationExams.com, a leading certification practice tests provider has released CCNA 640 802 (Cisco Certified Network Associate) practice tests. CCNA is intended for candidates who have experience in configuration and troubleshooting of small to medium networks using routers, switches, and hubs. The practice tests offered by SimulationExams include 200+ questions that provide a simulated test environment for candidates and facilitate taking final exam with confidence. The advantages of a simulated exam are:

Ability to gauge one's preparedness to take actual certification exam

To prepare for the exam objectives thoroughly from a different perspective (from the study guides)

To acquaint oneself with actual exam environment (such as timed test, lab practice, scenario based questions, etc.)

A two-track option is also available for passing CCNA. This option consists of CCENT (Cisco Certified Entry Network Technician), and CCNA ICND2. To achieve CCNA, one need to pass both CCENT (also known as CCNA ICND1), and the CCNA ICND2 exams. The single exam path is recommended for candidates who have at least 1 year experience in networking using Cisco routers and switches. Cisco certifications are generally valid for 3 years, and candidates are expected to renew certifications by taking renewal exam. CCNA is the foundation certification for taking CCDA, CCNP and other professional level exams.
