

Offsite Backup Solutions Offers Free 5 Gigabyte Residential Online File Storage Accounts

Residential computer users can now enjoy a free 5-gigabyte online file storage account to store digital photos, music files, documents, and other digital media.

March 26, 2008 (FPRC) -- Offsite Backup Solutions has announced that it will now offer a free 5-gigabyte personal online backup account for residential customers. As an added value, students will receive a full 10 gigabytes of free online file storage when they fax in their student ID.

“Our goal in providing free personal online file storage is to get more people into the important habit of backing up their data. Though most people know that they should, many say that they do not because they don’t know of a simple way to implement a backup procedure,” says the owner of Offsite Backup Solutions.

To encourage more people to commit to backing up their important files, Offsite Backup Solutions designed its online backup storage for maximum ease of use and minimal maintenance. Upon setting up a free online file storage account, customers need only to choose the files on their computers they would like to backup, select a time for the backup to occur daily, and the Offsite Backup System software automates the entire data backup process.

Account owners will also receive a daily backup report delivered by email to them that their files were successfully saved on Offsite Backup System’s ultra secure servers.

The free personal file storage solutions allows customers to backup as many computers as they want, access files from any online computer, and is compatible with Mac OS X v 10.2 and above and all versions of Windows. Offsite Backup Solutions includes free technical support for free personal accounts and promises no email spamming or popup advertisements as is typical with other free online data backup services.

Free account owners can store photos, music files, documents, personal blogs and websites, PDFs, videos, or any other type of media totaling up to 5 gigabytes at no cost. If storage needs exceed 5 gigabytes, Offsite Backup Solutions offers inexpensive and easily upgradeable paid accounts for storage of up to 100 gigabytes.

Those interested in a free personal online file storage account can download the backup software at http://www.offsitebackupsolutions.com/free_account.html.

About Offsite Backup Solutions: Offsite Backup Solutions is an online file storage company that provides simple, automated data backup solutions for clients around the world. The company is passionate about providing the highest quality of offsite data backup at extremely affordable rates.
