

## **InnoShare Expresses Interest in AccesStream's Enterprise Identity Access Management Solution**

*AccesStream (www.accesstream.com), developer of Open Source Enterprise Identity, Access Management and Security solutions, is in conversations with Atlanta-based business hosting provider, InnoShare (www.innoshare.com), to discuss the adoption of AccesStream's solution for Identity consolidation and user management for use in InnoShare's business hosting environment.*

June 17, 2008 (FPRC) -- AccesStream (www.accesstream.com), developer of Open Source Enterprise Identity, Access Management and Security solutions, is in conversations with Atlanta-based business hosting provider, InnoShare (www.innoshare.com), to discuss the adoption of AccesStream's solution for Identity consolidation and user management for use in InnoShare's business hosting environment.

Representatives of InnoShare indicated interest in the roadmap for AccesStream's product, stating that its architecture and ability to consolidate user profile information from a variety of sources and to leverage that consolidated information to manage access to various end-user applications. This capability, coupled with notable absence of licensing cost, would provide substantial cost savings over current solutions being used by the company.

"We will be following the product roadmap very closely, and will likely contribute to the AccesStream open source project once the initial codebase is published on SourceForge. The InnoShare hosting environment consists of a combination of Linux servers, and now virtual machines, along with a growing collection of third-party applications written in a variety of languages. Our growing and rapidly changing offering creates some challenges in profile, access and configuration management that we feel will be greatly aided by the flexible solution that AccesStream is developing."

AccesStream is an Atlanta-based provider of open source software which provides flexible integration between existing identity and access management systems, and enterprise software applications. The AccesStream product provides software developers with a no-cost, open source layer providing a consistent interface with which to integrate their software. AccesStream can easily be extended to integrate with other systems through the use of plugins for common profile stores, and users can create custom plugins for proprietary profile stores.

InnoShare is an Atlanta-based business web hosting, web design and search engine optimization firm. InnoShare provides professional, business-class hosting and design services that are affordable enough for small and mid-sized businesses. For customers with new or existing websites, InnoShare offers search engine promotion services to help businesses and organizations reach targeted, well-qualified clientele. InnoShare also provides custom enterprise architecture and application development services for Java/J2EE and PHP projects.
