

Electric Scooters 4 Less Offers New Power Chair

Electric Scooters 4 Less has just begun offering the Jazzy 614. This is a very rugged and durable power chair that is manufactured by Pride Mobility.

July 23, 2008 (FPRC) -- Electric Scooters 4 Less is proud to announce the release of the Jazzy 614 Power Chair. The Jazzy 614 is an electric wheelchair manufactured by Pride Mobility that is made for rugged outdoor use. This power chair is closely related to the Jazzy 614HD, which has long been considered one of the leading heavy duty electric wheelchairs available.

While these two chairs are closely related, the Jazzy 614 has a 300 pound weight capacity, which is 150 pounds lower than the Jazzy 614HD. The Jazzy 614 might not be able to support as much weight as its cousin, the 614HD, but it can travel up to 16 miles per charge, which is almost 50% larger than its cousin the 614HD.

Electric Scooters 4 Less is a leading supplier of electric mobility scooters, but they also offer lift chairs, adjustable beds, stair lifts, and many other types of mobility aids. They offer a complete and secure online shopping experience and they also have a fully staffed call center. Their highly trained staff is waiting to answer questions their products or help with the ordering, because sometimes it can be nice to have a more personal touch.

The CEO of Electric Scooters 4 Less, Chris Johnson, is very excited about offering this new electric wheelchair. He remarked that, 'The Jazzy 614 still has all the features that have made the 614HD so popular, including Active-Trac ATX suspension and easy to access service areas, but the increase in range really makes this power chair very a great choice if you do not need the weight support of the 614HD.'

Based out of Statham, Georgia, Electric Scooters 4 Less dedicated to providing quality products and services. They strive to offer the lowest rates available, but do not cut corners when it comes to quality.
