

Robert Bernardini, M.S Reveals Truth About Understanding Preventing and Reversing Childhood Diseases

Robert Bernardini's new book reveals stunning research on how to prevent or even reverse childhood diseases such as diabetes, cancer, ADHD, obesity, autism, and more.

August 13, 2008 (FPRC) -- Hailed as one of the most important books of our time by health care professionals, the new book by Robert Bernardini reveals stunning research on how to prevent or even reverse childhood diabetes, cancer, ADHD, allergies, asthma, ear infections, obesity, autism, behavioral problems, learning disabilities, and more.

The titled 'The Truth About Children's Health -- The Comprehensive Guide to Understanding, Preventing and Reversing Disease,' details how the body and mind of a young child differs from an adult. Furthermore the book explores why this is so important and how this impacts the child - a fact often times overlooked by many researchers and policy-makers. Heavily researched and written for the average reader, Bernardini's book documents how many maladies, even considered irreversible, can be improved and sometimes completely reversed.

"This is one of the finest resources on the market... Every parent should have a copy next to his or her bed for quick and easy access. I recommend each and every one of my patients have one and get one for someone they love. This publication is not just informative, but it could save your child's life," said Chadwick Hawk, D.C.

Robert Bernardini M.S. and his research team researched more than 800 references on the topic of causes and prevention of childhood disease. 'The Truth About Children's Health – The Comprehensive Guide to Understanding, Preventing and Reversing Disease' is the only book on the market that brings all of these startling facts on childhood disease in a single resource.

The book reveals four research breakthroughs uncovered during the research process:

Research Breakthrough #1: Childhood Disease Pattern Discovered

Health-care professional realize that conditions such as childhood asthma, allergies, depression, learning disabilities and others have increased to epidemic proportions in just the past two decades. Berardini's research team discovered many shocking hidden, unpublicized reasons.

Research Breakthrough #2: Windows of Susceptibility

There are certain stages of their development that are especially vulnerable to specific diseases such as brain cancer, diabetes, asthma, and so on. If a parent knows what to do (and what not to do) during these "windows of susceptibility," the child stands a much greater chance of avoiding that specific disease. This book details what parents need to do, from before conception through adolescence.

Research Breakthrough #3: Who's Protecting Our Kids?

Bernardini explains what is little known facts about government policies and why parents need to question them. From vaccinations to fluoridation to lead exposure and shaken baby syndrome, the book discusses the little-known reasons that the U.S. government makes policies that benefit

corporations rather than people.

Research Breakthrough #4: Alternative Health Land Mines

The research team concluded that many alternative health practices thought to be good for children might actually be harming their health. A list of these products and practices are exposed in Chapter XIII.

The book can be purchased on Amazon. Price including shipping is \$29.95. Those who order will also receive the Special Bonus Report: A 100% Effective Way to Prevent Sudden Infant Death Syndrome (S.I.D.S), a shocking expose written for new parents and childcare providers.
