

WG Wood Products Launches New Line of Specialty Wood Cabinets

From jewelry cabinets to billiard cabinets, WG Wood Products combines style and functionality in their new range of unique specialty storage cabinets.

August 13, 2008 (FPRC) -- OLATHE, KS -- The secret to an organized home is to find a place for everything. WG Wood Products has been helping American homes stay organized for years with custom-made wood cabinet and wood shelf systems. Their range of unique in-wall cabinets occupies a lone position in the marketplace. No other company offers the same storage solutions.

"From our WC-8 Jewelry Cabinet to our WC-10 Entry Valet Cabinet, we know our products are unmatched in the market. We have always prided ourselves on knowing what storage solutions American homes need and then custom building a solution," said Michael Sloan, owner of WG Wood Products (<http://www.wgwoodproducts.com>).

For the billiard buff, the WC-9 Billiard Cabinet is designed to be inset directly into the wall. The WC-9 Billiard Cabinet holds up to 6 cue sticks and features a combination glass/inset panel door with the choice of clear or frosted glass.

WG Wood Products says its best seller is the new WC-8 Jewelry Cabinet, which is equipped with a T-bar for necklaces and three felt-lined shelves. The WC-8 Jewelry Cabinet and the JC-2 Jewelry Cabinet come with a lock for added security.

"Jewelry needs to be kept neat and tidy. There's nothing worse than losing a precious earring because of a cluttered jewelry box. Our female customers particularly enjoy storing their jewelry so they can see it all in the one place. They also tell us that keeping their necklaces from tangling together is a huge benefit," said Sloan.

The WC-10 Entry Valet Cabinet is best suited for an entryway. The in-wall solution has a corkboard for sticky note reminders, an optional whiteboard door for messages, as well as separate areas for mail, cell phones, iPods, and keys. WG Wood Products also offers an optional power outlet.

"How many people enter their home and start dropping stuff all over? Then they have a hard time remembering where they left something. The idea was to allow our customers to keep all of the things needed while on the go in one place. This way, there is less chance of them forgetting something," said Sloan.

The WC-6 Wine Rack Cabinet has a flush in-wall design and holds up to 9 wine bottles as well as a place for a bottle opener. Similarly, the MB-2 MiniBar, with its double door configuration, holds 750ml bottles while allowing for ample storage space for six pieces of stemware, and additional glassware, as well as a small drawer and cabinet for bar accessories. The MB-2 MiniBar illuminates its contents with a light installed near the stemware.

"We are really pleased with our new range of specialty cabinets. We feel that they provide well-designed solutions to otherwise unsolved storage problems. From our Broom & Mop Closet to our Wrapping Paper Cabinet, our storage solutions serve functional purposes, yet always create a

talking point in the home due to their beautiful design," said Sloan.
