

## Think Wireless - Think Green - Think Conservation

*MyWirelessRep.com Associate Dr. Guy Etienne announces the launch of his new website for his wireless service My Wireless Rep. His site features rates, comparisons and a way for users of the service to get paid a percentage of their wireless bill as well as getting paid a percentage of the wireless bills of people they know.*

August 21, 2008 (FPRC) -- Since 1993, Lightyear Network Solutions, LLC, has been a cutting edge communications provider for residential and small to medium businesses. Recently they expanded their business to include wireless service.

Dr. Guy Etienne, a representative with the new wireless service called My Wireless Rep announced today the launch of his new website for this wireless service. The website is located here: <http://www.squidoo.com/earn-money-on-wireless-service>

From the new website

So where is My Wireless Rep different? How about if we pay you to use our service? And how about if we pay you every time someone else pays their monthly wireless bill, if they are your customers? And how about if we pay you every time someone that your customer refers pays his or her monthly bill.

'I think the potential to earn a substantial amount of money on a service that nearly everyone attached to us uses is the most important part of my business.' Said Dr. Etienne. 'My Wireless Rep is the only wireless company that will actually pay you for using their wireless service as well as pay you for referring others. This is a huge turning point for the wireless industry.'

There are 255 million wireless customers in America. Not one of them gets paid when they or someone they know pays a wireless bill..

Dr. Etienne's website explains wireless service and the importance of wireless service to its readers as well as where wireless is headed. Plus, for our green members we even have ways for them to trade in their old phones and have trees planted in their honor. And for the business minded customers, find out how you can get paid to use the phone service. It just may change the way you look at wireless service forever.
