

## **ProjectSpaces Releases Self-Hosted Perpetually Licensed Version of Its Online Collaboration Platform**

*Those needing collaboration software inside their firewall can now take advantage of ProjectSpaces' document management, project coordination, calendaring, blogs, Gantt charts, and other functions with its self-hosted online collaboration platform.*

September 22, 2008 (FPRC) -- ALEXANDRIA, VA -- ProjectSpaces (<http://www.ProjectSpaces.com>) announces the availability of a self-hosted and perpetually licensed version of the powerful and easy-to-use online collaboration platform.

This means customers who need cost-effective collaboration software installed inside their firewall can now take advantage of ProjectSpaces' document management, project coordination, calendaring, blogs and discussions, Gantt charts, and other functionality.

Government agencies, private sector organizations, and others can quickly and easily install ProjectSpaces to manage and collaborate on sensitive files and data that need to be managed on in-house servers.

Moreover, ProjectSpaces still offers a fully hosted option to customers who need a convenient, cost-effective, and worry-free turn-key extranet solution for project collaboration. Unlike other options out there that are either software-as-a-service (SAAS) or self-hosted, ProjectSpaces offers both. Customers can quickly and easily implement the SAAS version of ProjectSpaces and then have the option to migrate their existing site in-house. Details are available at <http://www.projectsplaces.com>

Organizations using VMware's virtualization platform can get up and running with ProjectSpaces extremely quickly and efficiently. ProjectSpaces will provide a virtual disk image with the application pre-installed that requires minimal configuration.

In addition, ProjectSpaces offers flexible support hours and upgrades. Customers can choose how much support they need for customization, implementation, training, strategic consulting, and other needs. And by upgrading annually customers can keep up with the latest enhancements ProjectSpaces releases.

About ProjectSpaces: ProjectSpaces, a powerful and easy to use extranet platform, is a product of Forum One Communications, an online strategy and development firm based in Alexandria, Virginia that has been in business since 1996. ProjectSpaces (<http://www.projectsplace.com>) helps project teams, workgroups, committees, partners, and others quickly and easily connect, share, coordinate, and collaborate. ProjectSpaces has simple pricing for both SAAS and self-hosted customers making it even more affordable. ProjectSpaces makes online collaboration easy.
