

US Medical Supplies Offers New Manual Wheelchairs

US Medical Supplies has always offered a few manual wheelchairs, but recently has greatly increased their inventory. They now offer close to 150 different types of manual wheelchairs, many of which offer special features, such as increased weight support.

October 8, 2008 (FPRC) -- US Medical Supplies, a leading name in the home medical equipment industry, has just increased the number and types of manual wheelchairs that they offer. Their inventory now includes over 125 different manual wheelchairs, including several well known and respected manufacturers, like Drive Medical. This includes extra-wide Bariatric chairs, which support 700 pounds, lightweight chairs, and also high backed reclining wheelchairs.

The manual wheelchairs that are offered by US Medical Supplies are all of high quality and come in a variety of different sizes. These chairs are great for traveling and, while electric wheelchairs are very popular and reliable, manual wheelchairs have stood the test of time and will offer many years of worry and maintenance free service.

A number of the manual wheelchairs that are now offered by US Medical Supplies utilize lightweight carbon fiber frames, which are chrome coated several times to make them resistant to chips and also helps to make them very striking. Many also make use of dual axels and highly engineered sealed wheel bearings, which allow for a very long use-life.

US Medical Supplies CEO, Jeff Sheffer, said "We have always focused on offering quality home medical equipment at the lowest price available. With the introduction of our large line of manual wheelchair, we are able to give the customer a wide range of options, while keeping the price very low."

US Medical Supplies, which is based out of Raleigh, North Carolina, offers many different types of home medical equipment. This includes a wide assortment of larger mobility aids, like mobility scooters, lift chairs, and stair lifts. However, they also offer thousands of smaller items, like diabetes test kits, urologicals, and stethoscopes.
