

Roatan Island Honduras – Photo of the Year 2008

Experience Roatan Island from your computer screen through the newly released Photo of the Year 2008, Picture of the Month for December, and their ever popular Photo of the Week! Enjoy a virtual vacation that will transport you to the warm sunny climate of this Island in the Caribbean off the coast of Honduras.

January 9, 2009 (FPRC) -- Roatan.ws releases a Photo of the Year, Month and Week, that is sure to lure everyone to Experience Roatan, Honduras right on their screen!

The Photo of the Year is a beautiful tube sponge contributed by Francis Swarts. Its color and glow is an awe inspiring reminder of the raw beauty that Roatan scuba divers and snorkelers experience every day!

The Photo of the Month is a sure lure for the fisherman in you! Forget the ice fishing... How about these Permit caught on the fly? Contributed by Conner Henry, this photo lets you experience the rewards of fly fishing in the shallow flats of Roatan with Pescado Roatan guided fishing charters.

In the Photo of the Week groups of Roatan tourists prepare to experience breathing under water for the first time through the Snuba method! Snuba is a blend between snorkeling and scuba diving without the hassle of heavy scuba gear and certifications. The new rage on Roatan, Snuba seekers enjoy the ease of breathing air from the surface while attached to a 20 foot air line 10-15 feet below the surface in the shallow waters of the reef. Snuba is like taking a dive in your tropical fish tank! Whether you are stuck at home in the snow or behind a desk at work, Roatan.ws Photo's of the Week and Month allow you to take a vacation without leaving your home. Experience Roatan at glacier speed with the Roatan.ws Photo Gallery! Roatan is only a screen away.
