

Broadcast Systems Monitoring - MTD Systems NAB 2009

A new level of monitoring broadcast, satellite, and digital cinemal systems not obtainable with traditional IT monitoring means.

Las Vegas (FPRC) April 19 -- MTD Systems has raised the bar on Broadcast Systems Monitoring. MTD uses any available means for getting data from broadcast systems. Many devices have no SNMP or have limited SNMP support and yet require monitoring. Traditional IT monitoring fall short of giving you the information you need to manage the system.

The MTD System will grab the logs from equipment, parse and archive them off the machine so your data is always stored. Meaningful messages are pulled out of these logs and used as status or alerts.

You'll find all of the usual network monitoring features too the features that by themselves just aren't enough to keep you on top of what's happening on a media based system whether for broadcast, satellite distribution, or digital cinema. MTD adds log support, media tracking, and a number of other enhancements.

Visit MTD Systems at NAB in Booth C4151. or on the web at: <http://www.mtdsystems.com>.

MTD Systems LLC (Monitoring Technology Development Systems), now in it's sixth year of operation, is known for solving complex systems problems, MTD Products are in use by major companies such as ABC, Belo, Fox, Tribune, Echostar, Deluxe, Safeway, JCPenney, and the US Government.
