

## **Anti H1N1 Swine Flu Propaganda Author Brings His Voice to new Blog**

*Thompson has opened a new forum of information, strongly divergent views, opinions, historical facts and updates with the new Swine Flu blog, [swinefluh1n1virus.wordpress.com](http://swinefluh1n1virus.wordpress.com) to bring his work to a ever growing audience of consumers, potential victims. Healthcare workers and care givers, travelers, and concerned citizens. The H1N1 Swine Flu blogging community represents a collaboration of many Swine Flu bloggers' and seeks and explores real viable answers to H1N1 Swine Flu issues.*

July 3, 2009 (FPRC) -- SEATTLE, WA. – Habib Thompson, hot new author of 'Swine Flu and the Other White Meat', 'H1N1-Swine Flu-The Inconvenient Truth' and 'H1N1 Swine Flu –Ground Zero' brings his voice to the blogosphere with the aid of Wordpress.com.

As a writer and free thinker, Thompson, has over 30-years experience as a alternative media spokesperson, with a variety of unique blog sites covering not only H1N1 Swine Flu and pork industry issues but also other highly controversial and relevant topics such as immigration, the green movement, and natural supplements, with articles appearing in Ezine articles as well as Goatrics.com. He has dedicated himself to the presentation of facts and common sense non classical media examination of the H1N1 Swine Flu pandemic and its unbreakable correlation to the pork industry and lobby.

The WHO has now declared the swine flu a global pandemic. There are 27,737 cases confirmed worldwide and the number is growing fast. However, only 141 deaths are confirmed, which gives the swine flu a mortality rate of 0.5%. Compared with the Spanish flu which killed about 10% of those infected it might be seen as a lot less severe. However, focusing on the mortality rate would be misleading. If the swine flu were as infectious as the Spanish flu, but had mortality rate of only 0.5%, it could still kill 6,500 New Zealanders or over 11 million people worldwide. That's a LOT of people and really reinforces how important the spread of the disease is.

BBC Medical Correspondent, Fergus Walsh, at his blog today,' There is concern that the virus might mutate in the southern hemisphere over its winter and become more virulent, but there's no sign of that yet. A pandemic vaccine is in early development; it will be autumn before the first doses are ready; they will be earmarked for front-line health workers and those with health problems.'

Habib Thompson has been extending the range of message via social networks, with profiles in Facebook, Twitter and a host of other platforms. By providing practical and moral support from the forum on the new <http://swinefluh1n1virus.wordpress.com>, he connects the consumer, the traveler, the parent and the worker facing the H1N1 Swine Flu pandemic challenge.

Upton Sinclair (1878-1968) Legendary author states 'it is difficult to get a man to understand something when his job depends on not understanding it'. 'I aimed at the public's heart, and by accident I hit it in the stomach'. Upton Sinclair, on his novel, 'The Jungle' (1906),

- \* Jane Allen, author of Swine Influenza-Symptoms and Help
- \* Subodh Gupta, author of -Meat Industry and Human Health

It is currently flu season in the Southern Hemisphere, and viral spread in Argentina has prompted schools there to give students an early vacation. But swine flu has not abated in the Northern Hemisphere, unusual since influenza usually retreats from summer's high heat and humidity. Confirmed U.S. cases have reached nearly 34,000 — a fraction of the infected are tested — and deaths rose 34 percent in the past week to hit 170, the CDC said Thursday. England's health minister said Thursday that his country faces a projected 100,000 new swine flu cases a day by the end of August. The 2009 swine flu outbreak in humans is due to a new strain of influenza A virus subtype H1N1 that contains genes closely related to swine influenza. The origin of this new strain is unknown. However, the World Organization for Animal Health (OIE) reports that this strain has not been isolated in pigs. This strain can be transmitted from human to human, and causes the normal symptoms of influenza.
