

Triple Diamond Energy Announces Joint Venture Project #6 for Existing Partners

Chris Jent of oil and gas drilling company Triple Diamond Energy announces the #6 joint venture project, an opportunity exclusive to existing partners.

September 25, 2009 (FPRC) -- ADDISON, TX - Oil and gas drilling company Triple Diamond Energy, has announced the unofficial launch of its #6 joint venture project in central Oklahoma. The opportunity is only available to existing Triple Diamond Energy partners.

Drilling of the two-well direct offset project is set to commence on November 2, 2009. Both projects will drill to approximately 5,000 feet.

Both projects are located in central Oklahoma, the fifth highest-ranking state in crude oil production. The state produces 3.3 percent of the nation's crude.

"Due to the drop in the rig count and the slowed economy, now is a great time to put oil wells into operation at a much lower cost than in recent years. If you believe in long-term energy, the current state of the industry creates a much more significant overall return," says Chris Jent, oil and gas industry expert and cofounder of Triple Diamond Energy.

Cofounded by Chris Jent Texas oil and gas industry expert, Triple Diamond Energy's primary objective is to find undervalued producing properties with significant life expectancy. Triple Diamond Energy continuously employs new technologies to improving operations and productivity to produce significant increases in oil and gas production.
