

Bespoke Home Bars by Barina Craft Get Bronzed

Barina Craft, a manufacturer of home bar furniture, introduces bronze tailoring for 2010.

September 30, 2009 (FPRC) -- Dublin, OH - Barina Craft, a manufacturer of home bar furniture, introduces bronze tailoring for 2010.

Want the look of a pre-war era classic wooden boat? Ask for silicon bronze Frearson drive wood screws to be used in certain areas. Widely used in the 1930s and 40s, they are still desired and in use by traditional boatbuilders today. Frearson screws contain a cross shaped tool recess similar to the Phillips minus the cam out angles incorporated for automated assembly and have a sharper angle. As they age, a natural patina forms which dulls the shine and tends to blend in with certain stains / colors producing a look preferred by many.

The standard list of customization options continues to expand. Current features available include a variety of stain choices (both main and accent), wood species selection, flush or recessed bar tops, port & starboard designs, wine rack, stemware holders, shelves, locking liquor cabinet, ball bearing sliding drawer, dry sink / fruit pan, bottle wells and more. Literally thousands of home bars are offered by combining the various elements. Make your bar truly one of a kind by adding a gold leaf monogram, emblem, name or other unique personalization.

Founded in 2007, Barina Craft creates customizable home bars furniture shipped throughout the continental United States thru their website at <http://www.barinacraft.com/>. Their marine inspired nautical home bars are designed, built & constructed using a combination of modern & traditional boatbuilding methods. All furniture is handcrafted by artisans in the USA utilizing steam bent solid mahogany and other hardwoods. Special requests are welcomed & encouraged.
