

Consonus Technologies Launches New IT Managed Services Offering – Consonus SAFE™ 2.0

IT service professionals, Consonus Technologies, have introduced brand new Consonus SAFE™ 2.0, a cost effective solution for effective content and email archiving software.

December 22, 2009 (FPRC) -- SALT LAKE CITY, UTAH - Consonus Technologies has announced the launch of an upgrade to its latest product - Consonus Secure Archiving for the Enterprise™ (Consonus SAFE™). Consonus SAFE™ leverages Symantec's Enterprise Vault™ content and email archiving solution in a hosted IT managed services configuration.

The Discovery Accelerator is the newest feature of the latest Consonus SAFE™. It is designed to cost effectively make the discovery process more efficient, thus making it ideal for use in legal support and dispute resolution environments. In addition, Consonus' latest release makes innovative use of a flexible policy engine that manages both message and compliance stores, and helps a customer use minimum storage space.

As Symantec's Channel Partner of the Year, Consonus Technologies is a recognized leader in the industry. Through its latest product, the firm offers consumers a taste of simple and pocket-friendly IT managed services, the stability and security of 20 Years of Consonus SAS70 Type II audited Data Center Excellence, along with the power of email archiving software that only a brand like Symantec can provide.

"Gartner's leaders quadrant has listed Symantec's Enterprise Vault™ for five consecutive years and it is the only product to receive this honor. Symantec in turn regards us one of the best integrators for the Enterprise Vault™, thus confirming to customers that we have combined the best of both worlds - Consonus and Symantec - to provide a service that is designed to yield maximum results," says Bob McCarthy, Co-President of Consonus Technologies, Inc.

The highly-resilient Consonus national data centers are managed to SAS70 Type II specifications and play host to the Consonus SAFE™ as well. By deploying the Symantec Enterprise Vault™, Consonus SAFE™ greatly facilitates business archiving with affordable pay-as-you-go options and no lump sum capital investments for storage and other related services. Consonus Technologies, Inc. uses its own turnkey package to ensure enhanced data recovery speeds with its tiered storage model. Companies using the latest Consonus product are guaranteed 24/7 year-round technical support for which Consonus is recognized.

"Cloud computing is becoming an essential part of every organization and Consonus SAFE™ helps facilitates this. For example, we tested the Consonus SAFE™ at Kapstone Paper and Packaging Company during its initial stages and in two weeks time found the file sizes had been reduced by 86 percent. Following this test drive, Kapstone has now fully deployed the product and the company estimates it will make a 280 percent ROI within the next three years. This is hardly surprising because Consonus SAFE™ eliminates the need for outsourced storage and greatly cuts down administrative expenses and burdens," concludes McCarthy.
