

UK Data Centre Space

UK Data Centre Space are pleased to announce the launch of their new website. UK Data Centre Space is a provider of flexible, secure and reliable Data Centre space. Reduce costs by sharing existing Data Centre infrastructure that is designed to grow with your business.

January 16, 2010 (FPRC) -- UK Data Centre Space are pleased to announce the launch of their new website <http://www.ukdatacentrespace.com>

UK Data Centre Space is a provider of flexible, secure and reliable Data Centre space that can be tailored to suit individual requirements to include private self contained data suites, shared data suites, caged data suites and managed hosting or colocation ranging from a single rack.

The cost to design, build and maintain a Data Centre requires substantial expertise, investment and funds. Operating costs can now be significantly reduced by sharing existing Data Centre infrastructure that is designed to grow with your business.

A Data Centre does not need to be geographically positioned close to your central office. Modern communications provide the flexibility of being located in a totally different part of the UK or even another country.

Power, Air Conditioning, Security, Resilience and Connectivity are all issues that need to be addressed when planning present and future Data Centre requirements.

UK Data Centre Space operates in purpose built secure sites that offer the latest modern facilities and total control of your systems.

The company can also implement bespoke & ready for business systems designed to withstand the most rigorous business requirements. They also provide managed and technical services, cloud computing and application development and offer advice in network security, virtualisation, business continuity, disaster recovery as well as providing environmentally sustainable solutions to fit all budgets.

Further details can be obtained <http://www.ukdatacentrespace.com/contact.htm> UK Data Centre Space respects the privacy of all enquires.
