

Free Audio Converter from DVDVideoSoft: Fast and Easy Conversion to Any Audio Format

DVDVideoSoft team announces today release of the newest version of Free Audio Converter, an audio format converter for Windows platforms.

January 29, 2010 (FPRC) -- DVDVideoSoft team announces today release of the newest version of Free Audio Converter, an audio format converter for Windows platforms. This very simple in use, yet very powerful, application renders a tremendous ability to convert from one audio format to another.

With Free Audio Converter conversion opportunities seem to be boundless. The program has been able to convert almost all currently popular audio formats, including MP3, WAV, OGG and others. And now upon requests of users and demands of technology improvements, Free Audio Converter features support of such lossless audio formats as FLAC and APE.

The most outstanding feature of the program is a simple usage. With Free Audio Converter conversion efforts are minimized to browsing desired files and choosing desired format of output files, all the job is done by the program.

Moreover, it is possible to customize presets for sample rate, channels and bitrate. Once the conversion is over, Free Audio Converter can open the output location or shut down computer automatically, so there is no need to control the conversion process all the way to its completion.

And finally, the everlasting pleasant thing about Free Audio Converter is that these amazing features are combined in one audio converter and all for free.

DVDVideoSoft spokesman: 'Free Audio Converter is released to match the needs and requests from our demanding users who always want to keep up with modern technology and benefit from our programs. The program is perfect completion of our Free Studio set which now includes 23 applications for downloading, converting and editing of audio and video.'

DVDVideoSoft team, the leading developer group of multimedia software is welcoming everyone on their website for direct download of Free Audio Converter.
