

IOS Health Systems Announces the Medios Referral Rewards Program

IOS Health Systems (IOS) a national provider of web-based electronic health systems announces the Medios Referral Rewards Program. The incentive program offers a \$500 cash reward to anyone who refers a medical practice to contract with Medios EHR.

March 10, 2010 (FPRC) -- IOS Health Systems (IOS) a national provider of web-based electronic health systems announces the Medios Referral Rewards Program. This exciting incentive program offers a \$500 cash reward to anyone who refers a medical practice to contract with Medios EHR.

Submitting the referral is easy to do, as a simple online form providing the referral's information and the medical practice's information is all that necessary. Over 400 referrals have been submitted in the first 2 weeks of the program's launch. Go to <http://www.ioshs.com/referral> for full details.

Upon signing with IOS not only will the referrals benefit with a \$500 reward, but the medical practices also benefit by using Medios EHR which was Preliminary ARRA 2011 certified by CCHIT on November 23, 2009. This Preliminary ARRA certification is a step toward enabling IOS providers and prospects to qualify for the \$44,000 - \$64,000 stimulus incentives by using 'certified EHR technology' supporting the achievement of 'meaningful use' as described in the American Recovery and Reinvestment Act of 2009 (ARRA).

Medios offers a revolutionary approach that breaks away from the outdated, complicated and traditional EHR model. Medios is 100% web-based offering secure and immediate access to patient data from your home, hospital, or office without prior installation or setup. Medios is the only EHR that offers the freedom to choose between 7 different innovative ways to document and provides a visually oriented interface built for the average user with little technical experience making it easy to work with. It connects physicians with labs, hospitals, medical devices, multiple insurers; and 95 percent of the country's pharmacies. Most importantly, Medios is backed by a strong service model that supports the practice before, during, and after the transition to electronic health records.

The Medios technology platform is adaptable and flexible by design able to easily link physicians to hospitals, patients, other physicians and 3rd parties such as; Insurers, MSOs, Physician Groups, Service Entities, etc. It can also connect physicians with labs, including Quest and Labcorp, two of the largest in the United States; a variety of insurers; 95 percent of the country's pharmacies and a multitude of medical devices. IOS solutions enable physicians to communicate amongst all healthcare entities and groups for a truly shared health information network.

Anthony Lopez, IOS Marketing Director stated, 'We are very excited about our Referral Rewards Program as the response has been outstanding. Not only are we providing a cash incentive to our referrals but giving medical practices the opportunity to use certified EHR technology and take full advantage of the healthcare Stimulus incentives.'

IOS Health Systems (IOS) is a privately held corporation with company headquarters in Miami, FL. IOS offers innovative healthcare technology software (Preliminary ARRA 2011 certified Medios 4.5,
