

Consonus Partners with NetApp to Provide Premier Disaster Recovery Solutions

A leading provider of data protection solutions, Consonus Technologies, announces that the company has partnered with NetApp to provide premier disaster recovery and data protection solutions.

April 12, 2010 (FPRC) -- CARY, NC - Consonus Technologies, one of the country's leading providers of award-winning data protection solutions, partners with NetApp to provide premier disaster recovery solutions.

Consonus is one of only 22 IT companies partnering with NetApp. NetApp creates innovative storage and data management solutions that also deliver outstanding cost efficiency. The company's solutions provide non-stop availability of critical business data, as well as simplify business processes. In addition to other world-class technologies, Consonus relies on NetApp to enable and extend the disaster recovery for their clients – and employs NetApp themselves.

"We utilize NetApp to enhance our Disaster Recovery capabilities because this technology not only provides the best storage platform for cloud-based data protection solutions, but also provides us with proven cloud delivery methodologies. Our exciting partnership with NetApp allows us to leverage the NetApp storage systems to provide incomparable reliability in our virtual business continuity platforms," says Jonna Murnick, Director of Marketing for Consonus Technologies, Inc.

Consonus has been planning, engineering and operating its own data centers with secure storage, networks, and applications for over 20 years. Through their expertise, this company strengthens a business while also preparing for the future. In customer data centers, Consonus can construct private clouds and enables Disaster Recovery in offsite customer data centers, colocation data centers, or through the Consonus cloud (virtual data center). Many companies struggle with implementing Disaster Recovery capabilities that fully address business needs, and traditional hardware-focused solutions rarely provide the speed of recovery required to ensure business continuity.

As businesses grow and times change, data protection is no longer sufficient and companies must establish and maintain business continuity that ensures critical applications are always available and can be recovered quickly. These needs can be met through patent-pending Consonus Virtual Business Continuity™, a cost-effective, reliable, virtual data center solution that enables companies to establish and maintain a resilient business continuity processes and infrastructure.

There are many benefits of utilizing Consonus data protection solutions. The company will first perform its Consonus Data Protection assessment in as little as two weeks to decipher the specific needs of the company. Consonus' experts then provide a technology roadmap that considers the business requirements within the current technology, as well as improve current backup configurations and policies.
