

## **Liver Cancer Cure Now Announces Graviola Cancer Cure**

*Money does not grow on trees but there is a cancer cure that does. Graviola has been shown to lower blood pressure, kill intestinal parasites, calm nerves, help arthritis, and benefit the liver and heart.*

August 19, 2010 (FPRC) -- Rick G. House, General Manager of Liver Cancer Cure Now, announced today "graviola has been proven to cure cancer. This tropical fruit indigenous to the Amazon and other tropical areas, contains a variety of compounds known as acetogenins or ACGs".

ACGs have been demonstrated to selectively destroy cancer cells, while having no effect on healthy cells. This is known as "selective cytotoxicity", and is the holy grail of cancer research. Their effectiveness is so well documented, that the pharmaceutical companies are working feverously to develop synthetic versions of the ACGs in graviola, which they can patent.

And there are even more remarkable findings regarding graviola. In laboratory testing, researchers have found that it outperforms the chemo drug adriamycin. One study showed that a natural substance found in graviola selectively killed cancer cells at 10,000 times the potency of adriamycin.

In 1997, Purdue University published news that several of the ACGs in graviola: "not only are effective in killing tumors that have proven resistant to anti-cancer agents, but also seem to have a special affinity for such resistant cells."

Graviola has been shown to lower blood pressure, kill intestinal parasites, calm nerves, help arthritis, and benefit the liver and heart. Money does not grow on trees but there is a cancer cure that does.

Mr. House further commented: "Due to the unholy union between the FDA and the big pharmaceutical companies, no safe, effective, inexpensive cure like the graviola cancer cure, will ever be approved".
