

KryptonSoft Expanded BlackBerry Application Development Outsourcing Services in New OS 6.0 SDK

Krypton Softwares, a leading offshore Mobile Application Development Company expanding its software development services for the latest BlackBerry Platform 6.0 SDK released by RIM in addition to the existing BlackBerry OS SDKs this week in their offshore development centre in India.

August 20, 2010 (FPRC) -- Krypton Softwares, a leading offshore Mobile Application Development Company expanding its software development services for the latest BlackBerry Platform 6.0 SDK.

'RIM has opened the gateway for BlackBerry OS 6.0 based devices by releasing the BlackBerry Torch device in US Market on 12th of this August 2010' said Reema Verma, the CEO of Krypton Softwares. In addition to release, RIM also committed to bringing BlackBerry 6 as an upgrade to the Bold 9700, Bold 9650, and Pearl 3G in couple of months. We are looking up the huge potential with new SDK Release to develop the more sophisticated app for BlackBerry business users.

KryptonSoft has been one of the pioneers on the Mobile Application Development to offer the Blackberry-based development services. The BlackBerry Developers at KryptonSoft carries more than 10 years experience in Mobile Development. KryptonSoft started development on BlackBerry since the release of 4.2 SDK and provide business apps for each BlackBerry OS SDK including 4.2, 4.5, 4.6, 4.7, 5.0 and now 6.0. KryptonSoft covers up the most range of devices than any other company and provide full support and services under the budget. If you are looking to oursource blackberry application development for your venture or want to expand your reach by BlackBerry Porting of your application, KryptonSoft is your one stop provider for all mobile development services.

The new OS 6.0 SDK Provides the most long awaited features. Some are listed below :

- a) It provides ability to create Shortcuts for different context within application, so that user has flexibility to directly jump to specific part of the application for faster access.
- b) The new context menu now open ups the popup menu that allows better control and include text, an application icon and a command.
- c) The Animation API, which can be used to quickly create common animation scenarios and allow customization for business specific requirements.
- d) First time the 2D Vector Graphics Support using OpenVG™ 1.1 API which uses hardware acceleration to reduce power consumption while providing smooth graphics that scale fluidly.
- e) The rendering is more smooth and fast by the inclusion of SVG API, which also support linear and radial gradients on fill and stroke paints, high quality anti-aliasing and smooth text rendering.
- f) The Absolute Position API so that UI objects can be placed anywhere on the screen using x, y position and can even be overlapped.
- g) Maps API
- h) Blackberry added support for Swipe gesture and Pinch gesture.
- i) The UDP Protocol support is included in 6.0 and it now accept all udp:// and datagram:// URL
- j) The messaging API is enhanced for inbuilt support for JSON, SOAP, RSS(RDF, Atom) and XML.
- k) The long awaited feature, which can change the way BlackBerry can be used is the inclusion of Scan 1 and 2D Bar Code API. Now, the stores can think multiple use of their BlackBerry Device.

KryptonSoft has also expertise in mobile development and mobile application porting for iPhone, iPad, Windows Mobile, Android, Pre-Palm WEB OS, J2ME and Symbian OS platforms. The variety of services demonstrates the expertise of the company, and the level of competency in developing robust and secure mobile application software.
