

HeuristicApps Update Virtual Rosary Application and Add 3 New Free apps for Ipod,Ipad and Iphones

Heuristic Apps have launched version 2.1 of their Virtual Rosary application and released 3 new free apps for Ipod,Ipad and Iphones. The update and new apps include themed bible quotes,messages and downloadable content. The free apps are all standalone modules of popular functions taken from the VirtualRosary.

June 17, 2011 (FPRC) -- The latest VirtualRosary provides many improvements and tweaks over previous version and allows additional and seasonal content to be downloaded. The interface has had an iconic make over. An Inspirations module has been added allowing the user to view themed content and messages to inspire them through their day or through stressful moments in life. A lent network function integrates with the VirtualRosary Facebook APP or Twitter and allows users to share what they intend to give up for Lent.

The application contains a full international catholic calendar, with information on Saints and events, automatic mystery selection, a choice of rosary beads, prayers, confessions, images and artwork, bibles, bible study programs, faith tests , Inspirational thoughts and messages and more.

Unique to the Virtual Rosary is the integration of social networking allowing users to share on Facebook or Twitter with friends how much rosary or bible study they do each day, their Faith test scores and more. The app puts back fun into learning religion for the younger generations.

Additional prayers, art and themed Inspirational messages can be downloaded from within the application tailoring the app to your moods. Users not requiring social networking can disable it.

The application is being heavily discounted in the Itunes APP store and many themed prayer packs have been created for users to download.

To give users a taste of some of the modules in VirtualRosary HeuristicApps this week released PocketPrayers a free app available in the app store now. A prayer viewer that can download additional content.

PocketInspirations a free app available in the app store now that shows bible quotes in a themed manner with additional downloadable content.

PocketCalendar a free app available now that shows the catholic calendar with events, Saints and detailed information on Saints.

All modules are taken from the VirtualRosary which integrates all of the above and more with no advertisements.

Developed by graduates and students from the University of Caloocan in Manila the application supports English, Portuguese, Spanish and Italian. Support for more languages is planned. French is included in PocketPrayers.

More features for version 2 are already in development and the Philippine developers from the

worlds second largest Catholic country have no shortage of new features and ideas to promote interest in their chosen Catholic faith further enhancing the social networking support and experience.

Users will soon be able to edit prayers and rosary text as well as add new prayers themselves.

Supported devices include iPhone, iPhone4 , Ipad and Ipad via iTunes and the Apple app store. An Android version is under development and Microsoft have expressed interest in a Windows Mobile 7 version.

About HeuristicApps

HeuristicApps specialize in Mobile application research and development undertaking outsourcing as well as developing their own applications and projects.

Working with large corporates and smaller SME's HeuristicApps are rapidly establishing themselves as a market leader and pioneer in multi platform mobile application design. Focussing on utilities and lifestyle applications.

Established early 2010 HeuristicApps have fast become both a participant and contributor to the many tech events taking place in the Philippine technology scene.
