September 8, 2011 (FPRC) -- Bandisoft announce that Bandizip, fully featured free archiving software has released in the early of September.

Bandisoft is well-known company by developing Bandicam which is a powerful, lightweight program used to record anything on the computer desktop screen.

Bandizip, because of its high quality and fast archiving, is the perfect program for compressing and extracting data files. These functions are similar other archiving software, but Bandizip is free archiving software with good quality.

Even though Bandizip is brand new software, the quality is the same quality as WinRar, WinZip or 7-Zip program. It support for ZIP, 7Z, RAR, ALZ, EGG, TAR, BH, LZH, GZ, BZ2, ISO, CAB, WIM, XZ, ARJ, and Z archives files and users can create self-extracting files (.EXE) and multi-volume (split) archives files.

The fast archiving technologies are key features of Bandizip. It uses "High Speed Archiving" and "Fast Drag & Drop" technology to increase the compression and extraction speed.

When you archive multimedia files (AVI, WMV, MP3...) or archived files (ZIP, RAR, 7Z...), you can't get good compression results. These files are hard to compress and sometimes the file size could be bigger than the original one. Bandizip's "High Speed Archiving" function will allow you to compress or bypass the files its own algorithm. It will increase the archiving speed dramatically.

A number of file archiving software extract files to temporary folder, and then it copies the files to the targeted folder. Bandizip's "Fast Drag & Drop" function does not use temporary folder, and it just extracts to the targeted folder directly. It will increase the extraction speed dramatically.

Another advantage of Bandizip is that it supports Unicode system. Bandizip has "Code Page", and it will allow you to select a language in archive without breaking international characters.

With "Fast Drag & Drop", "High Speed Archiving", and "Code Page" functions, Bandizip might be the sensation in archiving software market.
