

## **Kunming Conference Looks at Latest Innovations Related to Intelligent Networks**

*DirectRooms.com divulges that new research into intelligent systems and networks is to be revealed at a conference taking place in Kunming at the beginning of November.*

October 11, 2011 (FPRC) -- During the 4th International Conference on Intelligent Networks and Intelligent Systems, academics from the local university will be joined by engineers and developers who will be attending from countries worldwide to come and hear the findings.

Intelligent systems and intelligent networks are most commonly used by telecommunication companies and refer to the way data is passed down a reliable pathway such as voice data during a telephone call. As new technology allows phones to have more functions, and so different types of transferable data, intelligent networks allow for additional services without switching equipment having to be redesigned.

The conference will be discussing how developments are affecting the industry and ways in which system performance can be monitored more easily. A series of technical subtopics will also be reviewed and these are set to include parallel computing, neural networks, security technology and network robustness.

Presentations by designers will additionally be describing the architecture for successful intelligent networks and new technology being used such as advanced digital compression features.

Delegates attending the event will need to book a hotel Kunming City Centre for 1st through to 3rd November when the conference is staged at the Kunming University of Science and Technology.

Lek Boonlert, marketing head at DirectRooms.com commented: 'To be sure of finding the best hotel rates attendees should make an online booking and preferable early, as hotels will be receiving many more requests for rooms.'

### About DirectRooms

DirectRooms is an independent discount hotel reservations company based in Asia. Established and online since 2000 with over 55,000 hotels worldwide.
