

New Business Makes Green Investing Easy

GreenWorld BVI Brings Alternative Investments to Individuals

October 26, 2011 (FPRC) -- As commodity prices have skyrocketed recently, major global institutional investors have been investing heavily in farmland, timber, hotels and other alternative investments. Green World was formed to bring the same type timber investment and farmland investment opportunities to individuals.

“There has long been a perception that only the largest institutions such as Sovereign Wealth and Pension Funds could investment directly in such alternatives as timber investments and farmland investments,” said Josh Cohn, Partner at GreenWorld BVI. “Because we felt that there was a glaring gap in the market, we decided to bring the same offerings to individuals,” added Cohn.

GreenWorld BVI believes that green strategies are an excellent way to play a number of global trends from an increasing focus on sustainable timber investment to the rapid focus on farmland investments by governments around the world.

Although GreenWorld BVI is a new company, they hope to capitalize on individual investors’ desire for alternatives to stocks, whilst simultaneously aligning themselves with green, environmentally friendly best practices in the investment industry. Furthermore, Timber Investments and Farmland Investments are excellent hedges against unexpected inflation, and are not correlated to stocks or bonds. Many people may not be familiar with these types of investment opportunities, but GreenWorld BVI hopes to change this.

GreenWorld BVI currently offers the following opportunities to individual investors:

- Timber Investments
- Farmland Investments
- Green Energy Investments
- Hotel Investments
- Carbon Credit Investments
