

Laser Lipo New York Practice, ACSNY, Releases New SmartLipo Surgeon NY Website

Advanced Cosmetic Surgery of New York announces their redesigned website for men and women looking for SmartLipo to target problem areas on the body such as the hips, waist, abdomen, buttocks, and thighs.

December 27, 2011 (FPRC) -- COMMACK, NY – Advanced Cosmetic Surgery of New York has just launched its newly-designed website at <http://www.SmartLipoSurgeonNY.com> to educate patients about SmartLipo laser liposuction. The pages on the website are now in-depth places where web visitors can do research about SmartLipo as well as learn more about the unique methods that Dr. Asare and his team have developed for their laser lipo New York patients. Website visitors can also benefit from the new educational video on the home page, before and after photo gallery, and the blog area which is updated weekly by Dr. Asare and his staff.

The SmartLipo laser liposuction technology is exclusive in and of itself; additionally, Dr. Asare has developed a unique method of performing the procedure on patients using only local anesthesia. This method eliminates the risk of general anesthesia while also removing the high costs associated with said general anesthesia fees. The result is a procedure that is extremely safe and affordable for their SmartLipo NY patients. The SmartLipo laser technology targets fat cells; destroying, liquefying and removing them completely. Additionally, due to the heat in the laser fiber, the collagen in the deep layer of the skin is heated. This causes the collagen to contract; producing tightened skin.

Patients have reported amazing results with the Smartlipo laser liposuction including fast recovery in only one to two days, very little bruising post-procedure, and little to no discomfort afterward. They need only one treatment and can have multiple areas treated. The major advantage to this form of liposuction over any other is that patients can experience tightened skin. The SmartLipo procedure is therefore a welcomed remedy to minor skin laxity issues. It is an especially popular procedure during Mommy Makeovers at their laser lipo New York practices as well as for male gynecomastia treatment and for sculpting problem areas such as love handles and tummy flab.

Patients experience less bruising and pain with SmartLipo because the laser fiber targets only the fat, leaving the surrounding blood vessels and nerves largely undisturbed. There is very little post-procedure swelling or discomfort and most can get back to their regular routines in one to two days. Dr. Asare and his team of SmartLipo experts have performed hundreds of the procedures on their SmartLipo NY patients with an unbeatable nearly 100% satisfaction rate in their two AAAHC accredited surgical centers in Long Island and Manhattan, NYC.

Prospective patients looking for more information about Dr. Asare's unique SmartLipo techniques should visit their new website at <http://www.SmartLipoSurgeonNY.com>. They offer free New York laser lipo consultations and will devise a customized body sculpting plan for each individual patient's needs.

Advanced Cosmetic Surgery of New York can be reached at 5036 Jericho Turnpike, Commack, NY 11725. They also have locations in Manhattan and Queens.
