

Vrisko Limited Obtains an Import License for Biotech Products and Services.

Vrisko Limited announced that it has received an Import License from DEFRA (English Department for Environment and Food and Rural affairs) which will allow this company to begin purchasing and importing biotechnology products and services from overseas suppliers into UK.

January 20, 2012 (FPRC) -- Vrisko Limited announced that it has received an Import License from DEFRA (English Department for Environment and Food and Rural affairs) which will allow this company to begin purchasing and importing biotechnology products and services from overseas suppliers into UK and the rest of the European countries.

Vrisko limited has started collaborating with specialized companies in USA and Canada to provide innovative biotech solution for the scientific community in Europe in the form of scientific projects. By implementing a new approach to their customers by offering a large number of services from different sources put in project proposals or project packages, Vrisko Limited is able to offer innovative solutions for research and bioscience.

'By making direct purchases from overseas suppliers, we believe that over time we can offer the best products and services in the markets at very competitive prices.' said CEO of Vrisko Limited. Their main focus is custom monoclonal antibodies since they can be used in diagnosis and treatment of different diseases and it can provide solution for difficult target by antibody engineering services. The import license allows Vrisko limited to introduce into UK product obtained by difficult technologies such as antibody humanization services which is used to adapt mouse antibodies into human antibodies for clinical use, phage display technology to screen for difficult antigens.

Vrisko Ltd said 'As we continue working to expand our products and services, our ability to import innovative biotechnology products and services and put in a project proposal marks a significant milestone for our company '
