

New Tool Backpack Gives Finger Freedom

The newest tool backpack offers faster access to essential everyday tools while keeping your hands free.

December 3, 2010 (FPRC) -- The holiday season is coming fast upon us, and what better time to review the market and find what most tool lovers want most - a handy tool backpack to transport their tools while keeping their hands free.

With the never ending innovation in the tool marketplace, it is no wonder that most people are searching for an alternative to the classic toolbox for transporting their tools to and from the work site. Now, with the innovative development of the latest tool backpacks, people can now carry their favorite wrenches, screwdrivers, tape measures and even cordless drivers and still have complete hand freedom.

The newest tool backpack offerings from Leathercraft, Tool Era and other vendors are proving to be a major breakthrough in the small tool marketplace, with weekend hobbyists, electricians, plumbers, and many other people are discovering these specially designed backpacks that can hold dozens of small tools in one convenient backpack format.

"It's not just the handy backpack format that is causing these tool backpacks to fly off the shelf, but rather the incredible speed at which people can access any tool they desire, because everything is laid out like pages in a book, rather than being jumbled together in a big box" said Jack Sinclair, ToolBackpack.org's founder and president.

No longer do workers need to make multiple trips to and from the work site. Now, with the latest tool backpack offerings, all the tools get loaded in a convenient reinforced knapsack format, strapped on the back, and with two free hands, owners can carry back the paperwork and even a ladder all in a single trip.

"It really is just a natural evolution in the tool transportation market", Sinclair added. "There are more tools now, and having a way to carry them without using up your hands is a huge advantage."
