

Viper VoIP Business Phone System Product Web Site Launch

The Viper VoIP telephone system product web site launched today, introducing their latest business IP PBX system for enterprise customers. The new enterprise PBX does not follow traditional industry pricing models with no per-user licensing and includes free updates, upgrades and new features.

March 4, 2012 (FPRC) -- Viper Corporation announced today it is officially launching the Viper VoIP product web site for their new phone system and digital PBX solution for business VoIP telephone communications.

The new web site focuses primarily on factors that can benefit businesses, with special emphasis on cost savings, Return on Investment (ROI) and Total Cost of Ownership (TCO). The site also discusses advantages and disadvantages of hosted vs. premise based Voice over IP systems, as well as industry trends and communications solutions.

"Viper VoIP digital PBX version 4 is a next generation business telephone system and a game changer in the telecommunications industry", states Rolf Heitmann, Managing Partner and COO at Viper Corporation. "The new pricing structure is ground breaking and unheard of in this industry; providing free updates, upgrades and new features gives our customers unprecedented ability to plan and budget years and decades into the future."

The new release of Viper VoIP IP PBX features a fully integrated and complete call center reporting for even the most demanding contact centers, along with numerous other updates, enhancements and improvements. All new features and updates in Viper VoIP business telephone PBX version 4 is automatically made available to existing customers with maintenance agreements.
