

Business Phone Provider Offering Zero Per-user Licensing on VoIP Business Phone System

Viper Corporation, a global business phone provider, is sweetening their latest business VoIP solution for enterprise customers with a unique pricing model. The ground breaking IP PBX phone system pricing features zero per-user license fees for business phone customers.

March 20, 2012 (FPRC) -- Viper Corporation announced today a new and unique pricing model for its latest version of their business VoIP solution. The new business phone pricing model features the industry's first VoIP business phone system with absolutely no per-user license fees. The pricing model is permanent and does not change throughout the life of the system.

The new business VoIP pricing solution delivers on the Viper promise of providing the most cost effective IP PBX phone system on the market today. In stark contrast, other business VoIP solutions typically charge license fees for extensions, mailboxes, conference bridges, music on hold, call recordings, Unified Communications (UC), Outlook integration and other features. By eliminating one of the most expensive parts of a business phone system, Viper VoIP business phone systems is delivering the telecommunication industry's highest Return on Investment (ROI) and lowest Total Cost of Ownership (TCO) for a business phone system.

"Viper VoIP IP PBX version 4 with its unparalleled feature list and zero per-user license fees, makes it an extremely appealing system to businesses", states Rolf Heitmann, Managing Partner and COO at Viper Corporation. "Businesses and corporations are finding it overwhelmingly cost effective to switch to Viper VoIP, especially due the fact that there are no licenses to re-purchase when upgrading a Viper VoIP phone system. All other business phone solutions require customers to re-purchase licenses when upgrading to a new version. This alone makes it almost impossible to compete with our VoIP business phone system."

Besides the unique pricing model, Viper VoIP business phone systems feature a fully integrated and included call center reporting package for even the most demanding contact centers. All Viper VoIP business phone solutions run on industry standard server equipment and can utilize all industry standard telephones and accessories. New features and updates in the Viper VoIP business telephone PBX version 4 are automatically made available to existing customers with maintenance agreements.
