

## File-download.net Website Update

*File-download.net, a website that caters to the software download and registration has been updated recently. The website is useful for software developers and publishers to publish their products.*

May 29, 2015 (FPRC) -- The file download website (File-download.net) has been updated thoroughly to provide new features. The website caters to the needs for file hosting, download, and e-commerce using trusted third party payment processors. The back end enables software registration services, so that users may register their software with the server.

The new features include the following:

1. Improved navigation menu. The side navigation buttons have been updated to include the new products, and tested.
2. Sub-domains: The website has two sections, one for practice tests and another for network simulators including CCNA and Juniper. Visitors will be able to download and buy any product without leaving the site.
3. Revised Product Pages: Product pages have been revised for Security+, Server+ and others. The certification information along with the product download links have been provided.
4. Web page template: The website now has a new template enabling easy navigation and user friendly design.
5. New Products: file-download.net has been updated also to include the new products like ITIL Foundation, JNCIA-Junos (JN0-102), PMP, CCNA Security, and CCDA

The website is broadly divided into six sections, namely, Cisco, Microsoft, Prosoft, Checkpoint and Comptia downloads. Each section displays the constituent certs and available downloads. Network simulators site consists of Cisco, CompTIA and Juniper network simulators. New sections are added as and when required.

The web pages have been checked for compatibility with major Internet browsers including Internet Explorer, Mozilla Firefox, Opera, and Google Chrome.
