

Thermalabs Launches Its Moon Saucer Chair

Thermalabs has launched a new foldable and adjustable chair

January 20, 2017 (FPRC) -- Thermalabs, a leading producer of cosmetics, beach convenience products, and portable loungers has introduced yet another product – a dome-shaped chair that is both foldable and adjustable. Thermalabs has said that this product is ideal for use indoors and outdoors. It can be put in a living room, bedroom, balcony, college dorm, beach or garden. This move comes barely weeks after the company introduced its much-hyped range of beach chairs and beds. Thermalabs has also introduced (earlier this year) a series of beach tents under its Tent World brand.

Thermalabs is a leading cosmetics firm based in New York City. The company started out manufacturing tanning lotions and accessories. Indeed, Thermalabs has cultivated a reputation as a premium provider of self-tanning products. In recent times, though, Thermalabs has diversified its operation to cover other market areas within and outside the cosmetics industry. Thermalabs Tent World sub-brand is responsible for marketing and distributing the company's range of outdoor tents. Supremasea, another sub-brand, is in charge of all skincare products based on Dead Sea mineral salts. Mid-2016, Thermalabs also announced Organic Healthcare, its latest sub-brand that's in charge of all-natural organic healthcare products manufactured in Israel.

Thermalabs Moon Saucer Chair is designed to provide comfort for leisure. According to the company, it's a 100% location-independent relaxation accessory. It works and looks great at the beach, and in any other outdoor environment. It's also built for the poolside, and indoor locations such as the living room, balcony, or even bedroom. Unlike most traditional saucer chairs, which are bulky, the company's chair is lightweight and can easily be carried by both kids and adults. It's also foldable and adjustable, giving the user maximum flexibility when carrying or using it. Thermalabs Moon Beach Chair is built to look stylish, featuring a saucer shape, rugged black cover, and polished frame. The solid steel frames and sturdy polyester make it both durable and strong so that it can support the weight of a grown adult.

While responding to an information request, Thermalabs marketing coordinator, Alex Howard, said, "Thermalabs has today introduced yet another product – the Moon Saucer chair. This is an incredible recliner chair that provides bean-bag comfort on the go. It can be folded or opened for use within seconds and can be used by kids and adults. Our Moon Saucer chair looks and works great at the beach, garden, balcony, and in all other indoor and outdoor environments. The durable polyester cover is long-lasting, and the strong steel frame makes this chair reliable in the long run. It's rust-free, convenient and portable. It's one great addition to our inventory of outdoor products..."
