

Forklift manuals library published for warehouse managers

WarehouseIQ.com announces a new forklift service manual locator service that provides access to PDFs of all major brands of lift trucks and links to access hard copy manuals when electronic versions are not available

May 21, 2017 (FPRC) -- In an effort to support the materials handling industry, WarehouseIQ.com, a premier resource for warehouse managers, has created a new forklift manuals locator service.

Recognizing that an out of commission forklift hurts productivity in a warehouse operation, Warehouse IQ built its new forklift manuals library to help warehouse managers, warehouse assistants and forklift service mechanics to find a service manual they need to get a fork truck back into operation.

The materials handling site features repair and service publications for all major forklift brands and models including anyone looking for a Toyota forklift manual, a Caterpillar forklift manual or service manuals for Yale, Hyster, Crown, Clark, Linde and even Jungheinrich forklift equipment. Parts manuals, as well as service and repair manuals are available for all current and used forklift equipment going back 20 to 30 years.

If one of the site's pages does not list a resource needed, then there is an extra resource for personalized help so a warehouse personnel can contact the site's staff to request help in finding a particular service manual for a specific forklift make and model.

WarehouseIQ.com is a website which was launched in 2012 by a panel of warehouse industry experts. It is committed to becoming the premier resource and website for the material handling industry. It features blog posts, how to articles and educational materials that provide value to anyone who is working in the warehouse business or the materials handling product and services business that support this multi-billion dollar sector of the economy.
