

## **Thermalabs Inagua Art All-in-One Airbrushing System Launches**

*Thermalabs has launched a brand-new airbrushing machine*

June 10, 2017 (FPRC) -- Thermalabs today launched a new comprehensive airbrushing machine going by the name Inagua. The new system adds to six the total number of airbrushing systems that the firm has introduced over the last few years. The company appears to be working hard to emerge as a leading provider of airbrushing machines and accessories in the market.

Thermalabs is a major manufacturer of cosmetics products such as self-tanners. The company emerged into the global spotlight when it introduced its initial tanning lotion. Known as the Original Self Tanner, this lotion was formulated from the likes of Aloe Vera, Green Tea, and other considerably rare ingredients. The product delivered a beautiful tan within just four hours, which was significant given that most other lotions needed up to 6 hours to show results. The success that this product yielded in the market, as one of the best organic tanners back then, attracted a lot of positive criticism and media coverage for Thermalabs. Indeed, Thermalabs insiders have said that the company effectively rode on the success of its pilot launch to successfully pitch its subsequent releases.

Over the last couple of years, Thermalabs has introduced a number of new sub-brands as the company has tried to diversify its operations. The firm today owns and operates at least four sub-brands. These include Tent World, Supremasea, Thermalabs Organic Healthcare, and Thermalabs Air. Tent World is the firm's branch that creates outdoor tents for use at the beach, public parks, camping sites, and picnic spots. Thermalabs Supremasea brand creates skincare products that are based on powerful mineral salts extracted from the Dead Sea. Thermalabs Organic Healthcare, on the hand, is a fairly new sub-branch that produces organic health products based on naturally occurring herbs, seeds, and plants. Lastly, Thermalabs Air is the sub-brand behind the company's ever-growing line-up of airbrushing systems.

Thermalabs new Inagua comprehensive airbrushing system has been defined as a breakthrough in the airbrushing industry. The system is designed to eliminate the old ways where people use the likes of fingers, sponges, brushes and other traditional methods to apply make-ups. The airbrushing system disperses millions of tiny little droplets on the skin, which are layered together to create a uniform makeup layer. This leads to a superb, hardly-noticeable makeup application.

Alex Howard, the Thermalabs top marketing coordinator, has said that the new system can be used with all forms of makeup application needs, including tattoo application and body art. Mr. Howard also says that the system features distinctive features that make it better placed for makeup application. These include a low-maintenance nozzle, a one-press operation button, and adjustable spray patterns. Thermalabs new airbrushing system is now available to customers online via Amazon.com, or via the company's official storefront – [www.thermalabs.com](http://www.thermalabs.com).
